Complete Process Tracking & Management System

Business Process Consultant Report

Prepared: 03 June 2026

Procurement & Supply Chain Trading | Zoho Books Professional

1. Business Process Flow — Step-by-Step Analysis

Each of the 14 steps is mapped below with: the data to capture at that stage, where the current process breaks down, and the recommended fix.

Step 1: Customer RFQ / Requirement

Capture: Customer name · Contact person · Mobile · Email · Requirement details · Expected quantity · Target price

BREAKDOWN: RFQs arrive via WhatsApp, email, and phone — no single log. Leads get lost before a quotation is raised.

FIX: Create an Enquiry Register in Zoho Creator or Google Sheets. Every RFQ gets a unique ENQ-YYYY-NNN number on receipt.

Step 2: Quotation Submitted

Capture: Quotation number · Date · Quoted value · Validity date · Status (Pending / Approved / Rejected)

BREAKDOWN: No follow-up trigger when quotation is pending beyond validity. Approved quotations not linked to resulting PO.

FIX: Use Zoho Books estimates. Set 7-day auto-reminder. Link Estimate to Sales Order on approval.

Step 3: Customer PO Received

Capture: Customer PO number · PO date · PO value · Line items · Delivery terms · Delivery address

BREAKDOWN: PO stored as PDF in email — not mapped to quotation. Discrepancies between quoted and PO value not flagged.

FIX: Upload PO to Zoho Creator record. Auto-compare PO value vs quoted value; flag if variance > 2%.

Step 4: Purchase Order Sent to Vendor

Capture: Vendor name · Vendor PO number · PO date · Quantity · Rate · Expected delivery date

BREAKDOWN: No tracking of vendor PO acknowledgement. Delivery date is verbal — no written commitment tracked.

FIX: Log vendor PO in Zoho Books as Purchase Order. Record expected delivery date. Alert if no acknowledgement in 24 hrs.

Step 5: Material Procurement

Capture: Actual delivery date · Quantity received · Quality check status · Shortages or damages

BREAKDOWN: No inspection checklist. Short deliveries discovered at dispatch stage, causing delays.

FIX: Add Material Receipt Note (MRN) step in Zoho Creator. Flag quantity variance vs Vendor PO immediately.

Step 6: Purchase Bill Entry

Capture: Vendor bill number · Bill date · Bill value · GST · Payment due date · TDS if applicable

BREAKDOWN: Bills entered late, causing GST filing mismatches. No 3-way match (PO + MRN + Bill).

FIX: Zoho Books 3-way match. Bill entry deadline: same day as material receipt. Workflow alerts for overdue entry.

Step 7: Sales Order Creation

Capture: Sales order number · Linked Customer PO · Linked Vendor PO · Expected dispatch date

BREAKDOWN: Sales order created manually without referencing customer PO number — traceability gap.

FIX: Convert Zoho Books estimate to Sales Order. Mandatory field: Customer PO number. System auto-fills from earlier step.

Step 8: Invoice Creation

Capture: Invoice number · Invoice date · Invoice value · GST · Payment terms · Due date

BREAKDOWN: Invoices raised before material dispatched — cash flow confusion and customer disputes.

FIX: Enforce rule: Invoice can only be created after Dispatch is logged. Zoho workflow check before invoice approval.

Step 9: Material Dispatch

Capture: Dispatch date · Transporter name · LR number · Vehicle number · Quantity dispatched · e-Way bill number

BREAKDOWN: LR numbers stored in WhatsApp chat — not linked to invoice. POD collection has no follow-up system.

FIX: Dispatch form in Zoho Creator. Mandatory: LR number, transporter, dispatch qty. Auto-alert for POD after 3 days.

Step 10: POD Collection

Capture: POD date · POD image (upload) · Signed by · Delivery confirmation status

BREAKDOWN: No escalation if POD not collected. Disputes arise months later with no proof of delivery.

FIX: Zoho Creator POD upload field. Auto-escalate to management if POD not received within 7 days of dispatch.

Step 11: GRN Update from Customer

Capture: GRN number · GRN date · GRN quantity · Pending quantity · Short/excess qty · GRN status

BREAKDOWN: GRN data entered in a separate Excel file, not linked to invoice. Pending GRNs forgotten — payment delays.

FIX: GRN module in Zoho Creator linked to invoice. Auto-alert if GRN not updated within 7 days. Dashboard counter for pending GRNs.

Step 12: Payment Follow-up

Capture: Follow-up date · Mode (call/email/WhatsApp) · Customer response · Promised payment date

BREAKDOWN: No log of follow-up history. Same invoice chased multiple times. No escalation path.

FIX: Follow-up log in Zoho Creator per invoice. Automated weekly overdue email via Zoho Campaigns. Escalation if overdue > 30 days.

Step 13: Payment Received

Capture: Payment date · Amount received · UTR/reference number · Bank account · TDS deducted · Short payment

BREAKDOWN: TDS deductions not tracked against invoices — mismatch at year-end. Short payments not flagged.

FIX: Record payment in Zoho Books with TDS field. Auto-flag if payment does not match invoice value +/- TDS. Generate 26AS reconciliation report.

Step 14: Order Closure

Capture: Closure date · Final reconciliation · Profit on order · Document checklist (PO / Bill / Invoice / POD / GRN / Payment)

BREAKDOWN: Orders never formally closed. No per-order profitability calculated. Incomplete document files.

FIX: Closure checklist in Zoho Creator — all 6 documents must be uploaded/linked. Auto-calculate order margin. Status = Closed only when complete.

2. Recommended Database Structure

Use these as Zoho Creator modules or Google Sheets tabs. Primary keys (PK) link all tables.

Master Tables

CUSTOMERS

Field	Type	Notes
customer_id	PK · Auto	CUST-001, CUST-002...
customer_name	Text	Company name
contact_person	Text	Primary contact
mobile	Text	+91 format
email	Email	For auto-reminders
credit_days	Number	Standard payment terms
credit_limit	Currency	Block new orders if exceeded
gstn	Text	15-char GST number

VENDORS

Field	Type	Notes
vendor_id	PK · Auto	VEND-001...
vendor_name	Text	
contact_person	Text	
payment_terms	Number	Days credit from vendor
gstn	Text	
bank_details	Text	For payment processing

Core Transaction Table

ORDERS (1 row per order)

Field	Type	Notes
order_id	PK · Auto	ORD-2025-0001
customer_id	FK → CUSTOMERS	
vendor_id	FK → VENDORS	
enquiry_date	Date	RFQ received date
quot_number	Text	Zoho Books estimate no.
quot_value	Currency	

Field	Type	Notes
quot_status	Enum	Pending / Approved / Rejected
cust_po_number	Text	Customer's PO reference
cust_po_date	Date	
cust_po_value	Currency	
vendor_po_number	Text	
vendor_bill_number	Text	
vendor_bill_date	Date	
vendor_bill_value	Currency	
vendor_pay_status	Enum	Unpaid / Partial / Paid
sales_order_number	Text	Zoho Books SO number
invoice_number	Text	Zoho Books invoice no.
invoice_date	Date	
invoice_value	Currency	
invoice_due_date	Date	invoice_date + credit_days
dispatch_date	Date	
transporter	Text	
lr_number	Text	Lorry receipt number
pod_status	Enum	Pending / Received / Disputed
grn_number	Text	Customer-generated
grn_date	Date	
grn_quantity	Number	
grn_status	Enum	Pending / Done / Disputed
payment_status	Enum	Unpaid / Partial / Paid / Overdue
payment_received_date	Date	
amount_received	Currency	
outstanding_amount	Computed	invoice_value - amount_received
overdue_days	Computed	Today - invoice_due_date (if unpaid)
order_profit	Computed	invoice_value - vendor_bill_value
order_status	Enum	Active / Closed / Cancelled
closure_checklist	Multi-check	PO / Bill / Invoice / POD / GRN / Payment

Supporting Tables

FOLLOW_UP_LOG

Field	Type	Notes
followup_id	PK	
order_id	FK → ORDERS	
followup_date	Date	
mode	Enum	Call / Email / WhatsApp
response	Text	
promised_date	Date	

DOCUMENTS

Field	Type	Notes
doc_id	PK	
order_id	FK → ORDERS	
doc_type	Enum	PO / Bill / Invoice / POD / GRN
doc_file	File	PDF or image upload
uploaded_date	Date	
uploaded_by	FK → USERS	

3. Dashboard KPIs and Formulas

Build these as calculated fields in Zoho Analytics or Google Sheets, connected to your ORDERS table.

KPI	Formula / Logic
Total sales this month	SUMIF(invoice_date in current month, invoice_value)
Outstanding receivables	SUMIF(payment_status <> 'Paid', outstanding_amount)
Overdue invoices (count)	COUNTIF(overdue_days > 0)
Overdue amount	SUMPRODUCT((overdue_days>0) * outstanding_amount)
Pending GRNs	COUNTIF(grn_status = 'Pending')
Pending deliveries	COUNTIF(pod_status = 'Pending')
Vendor payables	SUMIF(vendor_pay_status = 'Unpaid', vendor_bill_value)
Monthly profit	SUM(order_profit) for current month
Gross margin %	(SUM(order_profit) / SUM(invoice_value)) * 100
Invoice due date	invoice_date + credit_days
Overdue days	MAX(0, TODAY() - invoice_due_date)
Pending GRN qty	invoiced_qty - grn_quantity
Order margin %	(invoice_value - vendor_bill) / invoice_value * 100
Customer-wise outstanding	SUMIF(customer_id = X, outstanding_amount)
Monthly sales (Sheets)	=SUMPRODUCT((MONTH(invoice_date)=MONTH(TODAY()))*invoice_value)

Recommended Zoho Analytics Reports

Aging Analysis: Bucket outstanding invoices: 0-30 / 31-60 / 61-90 / 90+ days. Bar chart by customer.

Customer-wise Sales vs Outstanding: Grouped bar: invoiced amount vs collected amount per customer, monthly.

Order Status Pipeline: Funnel/stacked bar: count of orders at each stage (Active > Dispatched > GRN Done > Paid > Closed).

Vendor Payables Aging: Mirror of customer aging but for vendor bills. Critical for cash-flow planning.

Monthly Profit Trend: Line chart: revenue, cost, and gross profit per month. Overlay margin % as secondary axis.

4. Automation Workflows

TRIGGER: Every Monday 9 AM

[Zoho Books: Automated payment reminders](#)

Weekly overdue invoice email to customers

Filter ORDERS where overdue_days > 0 AND payment_status != Paid. Group by customer. Send email with aging statement PDF. Escalation: overdue > 30 days — copy owner. Overdue > 60 days — SMS via Zoho Flow + Twilio.

TRIGGER: Every Monday 8 AM

[Zoho Analytics: Scheduled report](#)

Customer-wise outstanding report

Schedule every Monday, email PDF to owner + accounts. Report includes: Customer name, invoices pending, total outstanding, oldest invoice date, overdue bucket.

TRIGGER: 7 days after dispatch date

[Zoho Creator: Scheduled function](#)

GRN pending alert

Daily job: find orders where dispatch_date <= TODAY()-7 AND grn_status = Pending. Send WhatsApp/email alert to salesperson + customer contact. Escalation at 14 days to management.

TRIGGER: 3 days before due date

[Zoho Books: Payment reminder template](#)

Payment reminder before due date

Auto-email at invoice_due_date - 3 days with invoice copy. Second reminder on due date. Third reminder at +7 days overdue. Customise tone per customer tier.

TRIGGER: Real-time / every 3 hrs

[Zoho Analytics: Live data sync](#)

Dashboard auto-refresh

Native connector to Zoho Books — no code required. Data syncs every 3 hours. For near-real-time: Zoho Creator pushes to Analytics via API on every record save.

TRIGGER: Every Friday 6 PM

[Zoho Analytics: Scheduled PDF email](#)

Management MIS report

Contents: Total sales WTD, new orders, dispatches, collections, outstanding, pending GRNs, vendor payables, top 5 overdue customers. Delivered as PDF to management. Optional: WhatsApp via Zoho Flow + WATI.

TRIGGER: On dispatch logged

[Zoho Creator: Workflow trigger](#)

POD follow-up alert

When dispatch_date is filled, set reminder at T+3 days. If pod_status still Pending at T+3 — alert salesperson. T+7 — escalate to owner.

TRIGGER: On vendor bill entry

[Zoho Books: Vendor reminder](#)

Vendor payment due alert

Calculate due date (bill_date + vendor_credit_days). Alert accounts 2 days before to avoid late payment and maintain supplier relationships.

Tool Recommendation Summary

Zoho Books Professional (Core platform): Estimates, POs, Bills, Sales Orders, Invoices, Payments, Auto-reminders, GST returns

Zoho Creator (Workflow engine): GRN module, POD upload, Dispatch form, Follow-up log, Closure checklist, Custom alerts

Zoho Analytics (Reporting): MIS reports, Aging analysis, Pipeline dashboard, Scheduled PDF emails, Customer-wise drilldowns

AppSheet / Creator Mobile (Field access): LR entry on the go, Dispatch updates, POD photo upload from phone

Zoho Flow + WATI (WhatsApp alerts): Overdue escalations, GRN reminders, MIS to management via WhatsApp

5. Step-by-Step Implementation Roadmap

10-week phased plan for a 2-person team. Each phase builds on the previous.

Phase 1 — Foundation

Week 1-2

Week 1: Zoho Books setup: Configure chart of accounts, GST settings, customer and vendor masters, payment terms, invoice templates with PO number field. Enable Estimate > Sales Order > Invoice flow.

Week 2: Google Sheets bridge (interim tracker): Create master ORDERS tab with all fields from the database schema. One row per order. This gives immediate visibility while Zoho Creator is being built.

Phase 2 — Process Standardisation

Week 3-4

Week 3: SOPs and numbering: Define order numbering format. Create SOP document for each of the 14 steps. Train team on mandatory fields. Enforce: no invoice without dispatch date.

Week 4: Zoho Books workflows: Set up payment reminder schedules (-3 days, due date, +7 days). Configure vendor payment alerts. Test with 5-10 live orders.

Phase 3 — Zoho Creator App

Week 5-8

Week 5-6: Core modules: Build ORDERS form, Dispatch form, GRN update form, Document upload, Follow-up log. Connect to Zoho Books via API for invoice sync.

Week 7-8: Automation and alerts: GRN pending alert (7 days), POD alert (3 days), Overdue escalation, Closure checklist enforcement, Mobile access for field team.

Phase 4 — Analytics Dashboard

Week 9-10

Week 9: Zoho Analytics setup: Connect Zoho Books data source. Build 5 core reports: aging, pipeline, customer-wise, vendor-wise, profit trend.

Week 10: MIS automation: Schedule Monday outstanding report. Schedule Friday MIS PDF. Share dashboard with management. Train on self-service filters.

Phase 5 — Optimise and Scale

Month 3+

Ongoing improvements: Review KPIs monthly. Add AppSheet mobile app if needed. Explore Zoho Flow for WhatsApp integration. Consider Zoho CRM if sales pipeline tracking is required. Target: full system handling 1,000+ orders/month with under 15 min daily admin per team member.

6. Scale Guide — 1,000+ Orders per Month

Database Design Rules at Scale

Never use a single mega-sheet: At 1,000 orders/month x 12 months = 12,000+ rows. Google Sheets degrades above 10,000 rows with formulas. Use Zoho Creator as primary database; use Sheets only for exports and ad-hoc analysis.

Separate active and archived orders: Move orders > 6 months old to an ORDERS_ARCHIVE table. Your active working set stays fast. Archive query runs monthly via scheduled Zoho Creator function.

Index key lookup fields: In Zoho Creator: mark customer_id, invoice_number, cust_po_number, and payment_status as indexed. This keeps search and filter fast as volume grows.

Batch automations, not row-by-row: Weekly reminders must query once for all overdue customers and send grouped emails. At 1,000 orders this is the difference between a 2-minute job and hitting API rate limits.

Team and Process at Scale

Assign role-based access: Zoho Creator role profiles: Owner (all access), Accounts (billing, payments, reports), Operations (dispatch, GRN, POD), Sales (quotation, follow-up, read-only on financials).

Daily operations checklist: Morning: check pending dispatches + GRN alerts. Afternoon: check overdue follow-ups + vendor payments due. EOD: close newly completed orders. This is a 15-min routine, not a half-day task if the system is maintained.

Monthly reconciliation: First week of every month: reconcile Zoho Books with Creator data, verify all payments received are recorded, confirm GRN quantities match invoice quantities, calculate monthly profit report.

Best Practices for Procurement and Supply Chain

Always get PO before placing vendor order: Never procure on verbal instructions. Customer PO number must be recorded before vendor PO is raised.

3-way match before vendor payment: Pay vendors only after: Vendor PO + Material Receipt Note + Bill matches both. Prevents paying for undelivered or wrong goods.

Credit limit enforcement: Set credit limits per customer. Block new orders if outstanding > credit limit. Protects cash flow.

Document everything: Every order must have: Customer PO (PDF), Vendor Bill, Sales Invoice, LR copy, POD, GRN copy, Payment screenshot. A closure checklist enforces this automatically.

Separate trading margin visibility: Track buy price and sell price per SKU/item over time. Identify which items and customers are most profitable. Use Zoho Analytics to trend this quarterly.

This document was prepared for SK Enterprises as a complete process tracking and management system reference. Implement in phases as described in Section 5 for the smoothest transition.
